VESTA[®] NEXT Location Service

YOUR BRIDGE FROM **LEGACY TO NG9-1-1 DATA/**

One of the big changes for data integrity, in the move to Next Generation, is the fact that 9-1-1 Authorities will have more responsibility for data accuracy. The VESTA[®] NEXT Location Service provides 9-1-1 Authorities the opportunity for more control and greater flexibility to ensure data accuracy that meets their standards and is achieved on their timelines. It assists agencies in migrating their validation and routing data to NG9-1-1 with confidence. In short, it gives you an easy way to take action today to reduce your risk tomorrow.

Data accuracy in Next Generation takes on new meaning. Taking the right steps now will make all the difference and go hand-in-hand with your success in the ultimate migration to a spatially-centric Next Generation 9-1-1 (NG9-1-1) data environment.

An important first step is preparing the data elements to migrate to NG9-1-1. How you manage your ALI/MSAG data today has a profound impact on integrating the spatial elements required by NG9-1-1.

As part of our **VESTA**[®] NEXT Portfolio, which offers NG9-1-1 solutions as-a-service, our Location Service ensures your data migration into NG9-1-1 is successful.

WITH OUR LOCATION SERVICE, YOU HAVE:

- **Control:** Gain complete access and oversight of your data while improving its quality and reducing your team's headaches
- **Confidence:** Work with trusted providers that know NG9-1-1 and data migration
- **Simplicity:** Have an uncomplicated way to ensure today's underlying data is at the highest quality for your community
- **NG Data Migration Strategy:** Implement a sound strategy for a smooth migration from legacy (tabular) to GIS (spatial) data

LOCATION SERVICE

What's different about our Location Service from other solutions? Ours contributes three key benefits:

- 1) NG9-1-1 (LDB) Ready:** Our service is location database ready. It speaks both today's ALI and tomorrow's HeLD (HTTP-enabled Location Delivery) protocols, allowing for one or all of your PSAPs to transition into Next Generation when you are ready.
- 2) Holistic Approach:** It provides a quality foundation for preparing your data for NG9-1-1 by integrating spatial data management processes when you are ready.
- 3) NG9-1-1 Routing Integration:** It integrates with NG9-1-1 GIS Remediation Services. This means you can jump-start your migration to NG9-1-1 geospatial routing by deploying NG9-1-1 routing today with the VESTA® Router Service, part of the VESTA NEXT Portfolio. You are assured that your NG9-1-1 routing capabilities align with portfolio advances in spatial data, analytics, mapping and multi-media delivery.

YOUR DATA QUALITY

With all the changes in front of us, it is becoming increasingly difficult for 9-1-1 Authorities to keep up with every standard and the implications for their centers. At Airbus DS Communications, we understand how critical it is to begin managing your data quality today. Let us help you take this critical step with our Location Service. This is just one of our flexible database services offered to ensure you are in control and have a real-world view of your data environment as we migrate into NG9-1-1.

We are committed to your success and helping you create smarter ways to keep your community safe.

VESTA® NEXT Location Service

Part of the VESTA NEXT Portfolio, NG9-1-1 Solutions *As-a-Service*. Remove the burden of capital investment in your NG9-1-1 migration and gain confidence and peace of mind to focus on what matters most: the safety of your citizens.

AT THE HOME OF VESTA®, YOUR CRITICAL MATTERS®

As the world's most reliable source for Next Generation Public Safety communications, we keep people connected when it matters most. Our VESTA® solutions serve more than 60% of all U.S. Public Safety Answering Points, as well as Federal DoD operations globally. Our Emergency Notification products support the communications needs of hundreds of public and private sector organizations, and our Land Mobile Radio system delivers a true, non-proprietary P25 Radio solution. It's this innovation that earned us Frost and Sullivan's 2016 Best Practices Award as the NG9-1-1 Company of the Year.
